Task 1: Install Samba and Create a Shared Folder

Install Samba

- sudo dnf install -y samba samba-client

Enable and Start Samba Services

- sudo systemctl enable --now smb nmb

Check the status:

- sudo systemctl status smb

Create the Shared Folder

- sudo mkdir -p /music-share

Set permissions:

- sudo chmod 2775 /music-share

Set the SELinux context:

- sudo chcon -t samba_share_t /music-share

Make it persistent:

- sudo semanage fcontext -a -t samba_share_t "/music-share(/.*)?"
- sudo restorecon -Rv /music-share

Task 2: Create Users and Configure Samba Passwords

Create Linux Users

- sudo useradd partyuser
- sudo passwd partyuser

- sudo useradd guestuser
- sudo passwd guestuser

Add Samba Passwords

- sudo smbpasswd -a partyuser

- sudo smbpasswd -a guestuser

Enable both users:

- sudo smbpasswd -e partyuser
- sudo smbpasswd -e guestuser

Task 3: Configure Samba Share

Edit the Samba configuration file:

- sudo nano /etc/samba/smb.conf

Add the following at the end:

```
[music-share]
path = /music-share
browseable = yes
valid users = partyuser guestuser
read only = yes
write list = partyuser
create mask = 0664
directory mask = 0775
```

Check the configuration:

- testparm

Restart Samba:

- sudo systemctl restart smb

Allow Samba through the firewall:

- sudo firewall-cmd --permanent --add-service=samba
- sudo firewall-cmd --reload

Task 4: Access the Share from Windows

Open Run (Win + R) and enter:

- \\192.168.1.10\music-share

When prompted:

- Username: partyuser
- Password: ********

Verify on the Linux server:

- ls -l /music-share

Task 5: Restart Samba and Check Connected Clients

Restart Samba:

- sudo systemctl restart smb

Display Samba status:

- sudo smbstatus
