

Task 1: Check SSH Service Status

Check the status of the SSH service:

- `systemctl status sshd`

Task 2: Start and Stop Nginx Service

Installing Nginx

- `yum -y install nginx`

Start Nginx

- `systemctl start nginx`

Verify:

- `systemctl status nginx`

Stop Nginx

- `systemctl stop nginx`

Verify:

- `systemctl status nginx`

Task 3: Enable Cron Service

Enable the cron service:

- `systemctl enable crond`

Start the service:

- `systemctl start crond`

Verify:

- `systemctl status crond`

Reboot the system:

- `reboot`

Task 4: List Running Services

Display all running services:

- `systemctl list-units --type=service --state=running`

Find networking services:

- `systemctl status NetworkManager`

Task 5: Check Firewall Service

Check firewall status:

- `systemctl status firewalld`

Temporarily stop the firewall (only for testing):

- `systemctl stop firewalld`

Verify

- `systemctl stop firewalld`

Restart the firewall:

- `systemctl start firewalld`

Verify:

- `systemctl status firewalld`
