

Task 1: Install Linux

- Install RHEL/CentOS/Ubuntu Server on VMware.
- Log in successfully.
- Take a screenshot of the login screen.
- Save it as install_success.png.

Task 2: Change Hostname to myfoodiebox

- Check the current hostname:
 - hostname
- Change the hostname:
 - sudo hostnamectl set-hostname myfoodiebox

Task 3: Configure a Static IP

- Find your network interface:
 - ip a

Then:

- Edit a connection.
- Select your network interface.
- Change IPv4 Configuration to Manual.
- Enter:
 - IP Address: 192.168.1.100/24
 - Gateway: 192.168.1.1
 - DNS: 8.8.8.8
 - Save and Exit

Restart the network:

- sudo systemctl restart NetworkManager

Task 4: Enable SSH

- Install OpenSSH Server (if needed):
 - `sudo dnf install -y openssh-server`
- Enable and start SSH:
 - `sudo systemctl enable --now sshd`
- Check status:
 - `sudo systemctl status sshd`
- Find the IP address:
 - `ip a`
- From your host machine:
 - `ssh username@IP_Address`
- After logging in:
 - `whoami`

Task 5: Create User and Group

- Create the group:
 - `sudo groupadd foodies`
- Create the user:
 - `sudo useradd -G foodies zomatouser`
- Set the password:
 - `sudo passwd zomatouser`
- Verify group membership:
 - `groups zomatouser`
- Expected output:
 - `zomatouser : zomatouser foodies`
