

Task 1: Navigate to /home and list users

Open the terminal and run:

- pwd
- cd /home
- pwd
- ls

A terminal window titled 'root@localhost:/home' with search, menu, and close buttons. The terminal shows a user running 'sudo -i' to become root, then 'pwd' showing '/root', 'cd /home' to move to the home directory, 'pwd' showing '/home', and 'ls' showing the user 'nishitpanchal' in blue text.

```
root@localhost:/home
[nishitpanchal@localhost ~]$ sudo -i
[sudo] password for nishitpanchal:
[root@localhost ~]# pwd
/root
[root@localhost ~]# cd /home
[root@localhost home]# pwd
/home
[root@localhost home]# ls
nishitpanchal
[root@localhost home]#
```

Task 2: Create myplaylist and set permissions

Go to your home directory:

- cd

Create the directory:

- mkdir myplaylist

Move into it:

- cd myplaylist

Create the files:

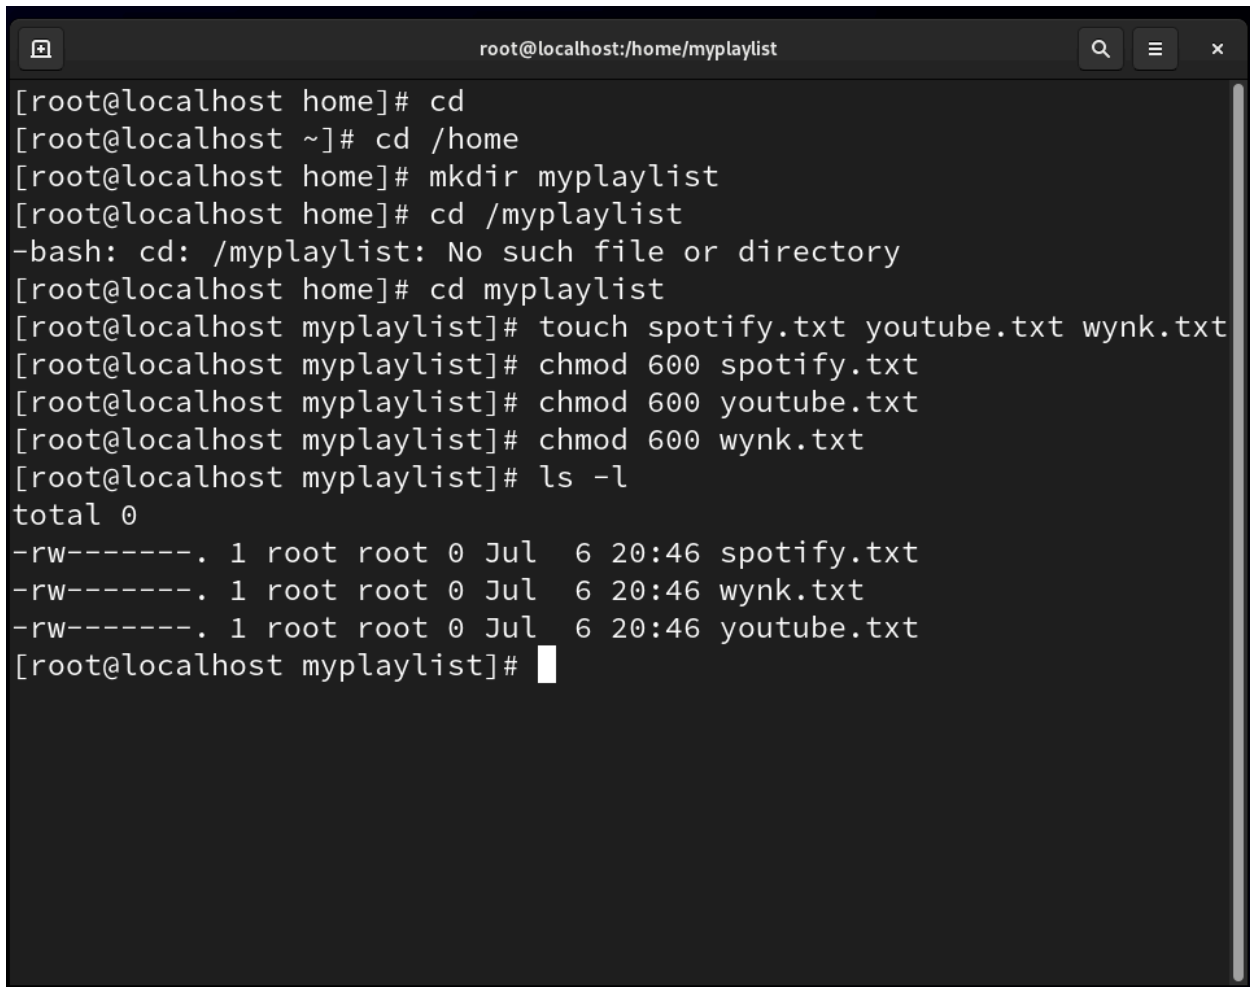

- touch spotify.txt youtube.txt wynk.txt

Set owner-only permissions (Read & Write):

- chmod 600 spotify.txt
- chmod 600 youtube.txt
- chmod 600 wynk.txt

Verify:

- ls -l

A terminal window titled 'root@localhost:/home/myplaylist' with search, menu, and close buttons. The terminal shows the following commands and output:

```
[root@localhost home]# cd
[root@localhost ~]# cd /home
[root@localhost home]# mkdir myplaylist
[root@localhost home]# cd /myplaylist
-bash: cd: /myplaylist: No such file or directory
[root@localhost home]# cd myplaylist
[root@localhost myplaylist]# touch spotify.txt youtube.txt wynk.txt
[root@localhost myplaylist]# chmod 600 spotify.txt
[root@localhost myplaylist]# chmod 600 youtube.txt
[root@localhost myplaylist]# chmod 600 wynk.txt
[root@localhost myplaylist]# ls -l
total 0
-rw-----. 1 root root 0 Jul  6 20:46 spotify.txt
-rw-----. 1 root root 0 Jul  6 20:46 wynk.txt
-rw-----. 1 root root 0 Jul  6 20:46 youtube.txt
[root@localhost myplaylist]#
```

Task 3: Change ownership

If you already created zomatouser in the previous assignment:

- sudo chown -R zomatouser:zomatouser /myplaylist

Create the user first:

- sudo useradd newuser

- sudo passwd newuser
- sudo chown -R newuser:newuser ~/myplaylist

Verify:

- ls -ld /myplaylist
- ls -l /myplaylist

Task 4: Create Symbolic Link and Hard Link

Go inside the home directory:

- cd

Create the symbolic link:

- ln -s /myplaylist/spotify.txt favmusic

Create the hard link:

- ln /myplaylist/spotify.txt spotify_hardlink

Verify:

- ls -l

```

root@localhost:~
[root@localhost ~]# cd
[root@localhost ~]# ln -s /myplaylist/spotify.txt favmusic
[root@localhost ~]# ln -s /myplaylist/spotify.txt spotify_hardlink
[root@localhost ~]# ls -l
total 4
-rw-----. 1 root root 1088 Jul  3 10:21 anaconda-ks.cfg
drwxr-xr-x. 2 root root  57 Jul  3 11:06 backup_playlist
lrwxrwxrwx. 1 root root  23 Jul  6 22:22 favmusic -> /myplaylist/spotify.txt
drwxr-xr-x. 2 root root  48 Jul  3 11:09 music_playlist
-rw-r--r--. 1 root root   0 Jul  3 10:51 my_linux_journey.txt
lrwxrwxrwx. 1 root root  23 Jul  6 22:23 spotify_hardlink -> /myplaylist/spotify.txt
[root@localhost ~]#

```

Task 5: Create a group and assign permissions

Create the group:

- sudo groupadd musiclovers

Add your user to the group

- `sudo usermod -aG musiclovers student`

Change the group ownership:

- `sudo chgrp -R musiclovers ~/myplaylist`

Set directory permissions:

- `chmod 770 ~/myplaylist`

Verify:

- `ls -ld ~/myplaylist`
- `groups`
