

Task 1: Display Running Processes and Save to a File

Display all processes for the current user:

- `ps -u $USER`

Save the output to a file:

- `ps -u $USER > ~/my_processes.txt`

Verify:

- `cat ~/my_processes.txt`

Task 2: Find the PID of a Music Player

Start a music player (Spotify, VLC, etc.).

Find the process using:

- `pgrep -l vlc`

Task 3: Kill the Process

Terminate the process:

- `kill 3456`

Verify:

- `pgrep vlc`

Task 4: Run a Background Job

Start a long-running command:

- `ping google.com &`

Display background jobs:

- `jobs`

Bring it to the foreground:

- `fg %1`

Check jobs again:

- `jobs`

Task 5: Change Process Priority

Start a process with lower priority:

- `nice -n 10 ping google.com`

Find the PID:

- `ps -ef | grep ping`

Change priority:

- `renice 10 -p 4567`

Verify:

- `ps -o pid,ni,cmd -p 4567`
