

Task 1: Install MariaDB and Verify

Install MariaDB Server

- `yum -y install mariadb-server`

Start MariaDB

- `systemctl start mariadb`

Enable MariaDB at boot

- `systemctl enable mariadb`

Check service status

- `systemctl status mariadb`

Verify MariaDB version

- `mariadb --version`

Task 2: Create Database, Table and Insert Records

Login to MariaDB:

- `mysql -u root -p`

Run the following SQL commands:

```
CREATE DATABASE foodie_app;
```

```
USE foodie_app;
```

```
CREATE TABLE restaurants (  
    id INT PRIMARY KEY,  
    name VARCHAR(100),  
    cuisine VARCHAR(50),  
    rating FLOAT  
);
```

```
INSERT INTO restaurants VALUES  
(1,'Pizza Palace','Italian',4.6),  
(2,'Spice Villa','Indian',4.2),  
(3,'Dragon House','Chinese',3.9);
```

```
SELECT * FROM restaurants;
```

Task 3: Display Restaurants with Rating Greater Than 4.0

Run:

```
SELECT name, cuisine  
FROM restaurants  
WHERE rating > 4.0;
```

Task 4: Create User and Grant Permissions

Create user:

```
CREATE USER 'zomato_user'@'localhost'  
IDENTIFIED BY 'zomato123';
```

Grant permissions:

```
GRANT SELECT, INSERT  
ON foodie_app.*  
TO 'zomato_user'@'localhost';
```

```
FLUSH PRIVILEGES;
```

Exit:

```
EXIT;
```

Login as the new user:

```
mysql -u zomato_user -p
```

Password:

```
tops?123
```

Use the database:

```
USE foodie_app;
```

Insert a new record:

```
INSERT INTO restaurants  
VALUES (4,'Burger Town','American',4.3);
```

Verify:

```
SELECT * FROM restaurants;
```

Task 5: Update Italian Restaurant Ratings

SQL Query

```
UPDATE restaurants  
SET rating = 4.5
```

```
WHERE cuisine = 'Italian';
```

Verify:

```
SELECT * FROM restaurants;
```
